**Lidocaine Description**

Lidocaine is the best anesthetic agent. It is indicated to produce local anesthesia when applied through infiltration or nerve block. It has a rapid, deep, and extended anesthetic action. It allows working in the most delicate dental procedures such as preparation of stumps in live teeth, pulpectomies, and surgical treatment of periodontitis. The non-ionized ratio and the diffusion capacity of this anesthetic decrease in presence of an acid pH.

Order No. NL063

ENDOFLAS F.S. is an advanced formula, the result of extensive research. Its effectiveness has the support of 30 years of clinical and laboratory studies, and of its successful use in more than 20 countries.

**Novacryl®**

The formulation of Self-cure Novacryl® -LIQUID AND POWDER- is appropriate for the making and repairing of provisional bridges and crowns that must stay for a short period of time inside the patient's mouth. Teeth colors are similar to natural teeth shades.

A good dimensional stability can be achieved when the right liquid-to-powder ratio is used as indicated by the manufacturer.

The natural translucent effect of enamel is achieved with the use of incisal-coloured Novacryl®.

This acrylic resin does not require heat treatment for its cure.
